Xi Li

Irvine, CA | 747-321-7841 | xil43@uci.edu | github.com/XenaLi96 | xenali96.github.io

Profile

Ph.D. researcher in Computer Science at UC Irvine working on single-cell and spatial genomics, large-scale multimodal datasets, and reliable biological foundation models. First author of **sMMC-22M** and a foundation-model bias/reliability study; co-author of **TargetSage**. Experience includes **ATAC-seq cross-modal super-resolution**, **Perturb-seq fine-tuning of scGPT**, disease-state and multi-target analysis, and population/context-aware model evaluation aimed at more consistent performance across groups.

Education

University of California, Irvine	*Ph.D., Computer Science*	Sep 2023 – Present
Tsinghua University	*M.S., Computer Science and Technology*	Sep 2019 – Jun 2022
University of Science and Technology of China	*B.S., Information Security*	Sep 2015 – Jun 2019

Expected Ph.D. graduation: June 2027.

Research Experience

University of California, Irvine — **Irvine, CA**
Ph.D. Student Researcher — *Sep 2023 – Present*

- **sMMC-22M — single-cell multimodal data and benchmarks (first author).** Built a context-aware resource for cell-level modeling; expanded releases contain **28.3M cell-aligned targets across 25 tissue categories**. Tracked study, assay, and coordinate provenance, distinguishing native Xenium cells from derived Visium HD targets.
- **Foundation-model bias and cross-population reliability (first author).** Fine-tuned and evaluated multiple biomedical foundation models across population and biological-context groups. Developed support-calibrated reliability evaluation of aggregate and worst-context performance, **aiming to reduce bias and improve consistency across groups**. Manuscript: *Context Is Not a Side Note. Under review; three reviewers recommended oral presentation.*
- **ATAC-seq — spot-to-single-cell super-resolution (co-author).** Supplied the core code framework for a collaboration with **Yi Dai**, supporting spot-to-single-cell prediction and ATAC-specific optimization that jointly uses other modalities to improve ATAC prediction accuracy.
- **CRISPR/Perturb-seq — scGPT fine-tuning.** Used **Perturb-seq data to fine-tune scGPT** in TargetSage and InverseTURB-related research, connecting disease-state context and multi-target reasoning to perturbation-conditioned cellular responses.
- **TargetSage — LLM-enabled target prioritization (co-author).** Responsible for **disease-state verification and multi-target investigation** in an evidence-grounded framework combining biological knowledge, interpretable LLM reasoning, and positive–unlabeled learning. The overall model improved **macro-average Adjusted F1 by 37% relative to the strongest of 10 baselines**, across 15 tasks and 19,032 genes.
- **Spine — perturbation-conditioned response modeling (first author).** Developed a formulation that disentangles tissue context from perturbation-conditioned spatial response fields. Extended TargetSage reasoning toward spatial perturbation research, linking disease-state context and multi-target hypotheses to tissue responses; manuscript under review.
- **STMoE — transferable expression prediction (first author).** Built a multi-scale mixture-of-experts model for single-cell gene-expression prediction across **25 organs**, using frozen UNI2-h representations, contrastive alignment, and training-only molecular reference banks. Retained **70% of predictive performance** under cross-sample generalization.
- **Algorithm validation and data quality.** Constructed in-domain, cross-patient, and cross-platform benchmarks; used provenance-aware splits, dataset QC, and training-only reference banks to assess transfer and limit molecular-reference leakage.

Technical Skills

Genomics	Single-cell and spatial transcriptomics, ATAC-seq cross-modal super-resolution, CRISPR/Perturb-seq modeling, multimodal data integration, expression prediction
Foundation ML	scGPT fine-tuning, population/context bias evaluation, support-aware reliability, contrastive learning, LLM reasoning, positive–unlabeled learning
Engineering	Python, PyTorch, multi-GPU experimentation, large-scale data curation and QC, patient/study/assay-aware evaluation, reproducible benchmarking

Mentoring and Open-Source Leadership

Google Summer of Code (GSoC) **2025 & 2026**
Project Mentor

- Provided **end-to-end mentorship to two students** across the 2025 and 2026 projects, guiding problem formulation, implementation, experiments, and paper development; both projects have code repositories.
- Guided a student to publish **one student-first-author paper at BIBM**.
- Projects: **2026: Omni-ST** — instruction-driven multimodal spatial modeling; **2025: Disentangled Generation and Editing of Pathology Images** — controllable pathology-image generation and editing.

Earlier Research and Industry Experience

Hantao Zhiying *2022 – 2023*
Chief Product Lead. Led AI imaging product definition and delivery across research, engineering, and design.

Multimedia Lab, Tsinghua University *Oct 2021 – Sep 2022*
Researcher. Developed and deployed an audio–visual camera-production system at **China's National Centre for the Performing Arts**.

ByteDance AI Lab *May 2021 – Dec 2021*
AI Product Manager — Full-Time Intern. Incubated **Alchemy** for Fanqie Novel book covers; supported **Chimera** assistant solutions through **XPENG/QCraft** client engagement.

ByteDance — Feishu/Lark *Jun 2020 – Nov 2020*
Data Product — Full-Time Intern. Applied behavior and relevance analysis to enterprise search-product design.

Nolibox / Computational Aesthetics *Mar 2020 – Aug 2020*
Partner and Co-founder. Built automatic logo-generation and font-stroke generation tools for AI-assisted design.
